

Agenda - Voting / Poll System Project

This agenda outlines the discussion points, objectives, and implementation plan for the Voting / Poll System project.

- Introduction to the Voting / Poll System
- Understanding the Problem Statement
- Objectives of the Project
- Discussion of Required Features
- System Design and Workflow
- Frontend Development using HTML, CSS, and JavaScript
- Local Storage Integration for Saving Votes
- Implementation of Multiple Vote Prevention
- Displaying Instant Results and Percentage Calculations
- Testing and Debugging
- Future Improvements and Enhancements
- Project Demonstration and Conclusion

Key Features

Feature	Description
Create Poll	Allows admin/user to create polls with multiple options
Cast Vote	Users can select and submit their preferred option
Instant Results	Results are displayed immediately after voting
Prevent Multiple Voting	Restricts users from voting more than once
Percentage Display	Shows vote percentage for each option
Local Storage	Stores voting data in browser local storage

The Voting / Poll System aims to simplify opinion collection and provide real-time analysis through an interactive and user-friendly web application.
